- Creating a fully featured gRPC-based back-end written in Go
- Designing a blockchain-based micropayment solution
- Leading a team of developers and building agile processes

Freelancer   2021-present
Henry Gressmann Software Engineering

I've been creating production-ready software for more than 6 years and offer end-to-end full-stack development and consulting on scalable software architectures. Right now I'm mainly working on creating developer tooling, building large and maintainable codebases in various languages and frameworks, security analysis and performance optimization. You can check out the full portfolio of my work on henrygressmann.de/work
